Hi Phillip and Judy,

Attached is the most recent data file in SPSS. This file includes a lot of variables that show recodes and such, but it's in a form that we need to conduct the analyses. As such this is not a cleaned up version. As part of the deliverables to complete the contract we will clean up the data and provide EPA a cleaned-up version. However, the cleaning up needs to happen after we finalize the technical report.

Please let me know if you have any questions. Next thing I'm working on: compiling and sending you a current version of the report. I want to underscore that this will be an extremely rough version—as it hasn't gone through any edits or revisions.

Thanks,
Tiffany
